- and at the local level, helping countries to accelerate implementation and take a long-term sustainable development response to HIV/AIDS;
- strengthening the monitoring and evaluation capacity of countries to track the efficiency, effectiveness, and transparency of their HIV/AIDS response;
- and building up stronger health and fiduciary systems.

The World Bank has issued a policy research working paper on "Implications of higher global food prices for poverty in low-income countries". The paper noted that results using household data for ten observations on nine low-income countries show that the short-run impacts of higher staple food prices on poverty differ considerably by commodity and by country, but, that poverty increases are much more frequent, and larger, than poverty reductions. The recent large increases in food prices appear likely to raise overall poverty in low income countries substantially.
