The map displays the density of damage in Gaza based on satellite imagery dated November 6th. The map does not include a count of damaged buildings and further has not been validated by observations on the ground. The density of heat map colors is related to the total number of detected damage points at a single point in time, important to note when comparing damage density from different dates.

Data sources:
- Damage affected areas: IMPACT / UNOSAT
- Locality boundaries: REACH MSNA 2022
- Evacuation line: LiveUA
- Satellite imagery: WorldView-2 from 1 November 2023 and 10 May 2023
